CC: leg pain

HPI: 58M hx of AAA s/p EVAR 1-year ago p/w pain in his right calf and foot. He noticed some discomfort while walking approximately 1 week ago. About three hours ago he awoke with severe right lower extremity pain. He was unable to bear weight on it when he tried to get out of bed. He reports numbness and says its color of his leg from the knee down is "off" compared to normal. He describes the pain as searing, constant, and rated 8/10. He has not tried to take anything to make it better. It is worse with movement.

PMH:

- HTN, on 25 mg losartan QD and 12.5 mg carvedilol BID

PSH:

- Endovascular AAA repair Oct 2023 for 7.1 cm aneurysm, bilateral groin access, stent graft placed infrarenal

Social Hx:

- Actively smokes 0.5 ppd cigarettes. 40 pack-year hx
- Denies illicit drug use

Imaging:

- EKG July 2024: sinus rhythm, normal EKG
- CT angiogram July 2024: Patient infrarenal stent graft without evidence of migration or endoleak. Atherosclerotic disease burden of the bilateral iliac arteries is minimal.
- Femoral POCUS today: Right CFA patent with good flow on color Doppler

Physical Exam:

- Gen: visibly in pain, sweating
- HEENT: EOMI, PERRL, normocephalic, atraumatic
- Pulm: breath sounds vesicular b/l, no wheezes or rhonchi
- CV: regular rhythm auscultated, normal S1/S2 without murmurs or rubs
- Pulse exam femoral/popliteal/PT/DP: left 2/2/2/2; right 2/0/0/0, no Doppler signal identified in RLE DP or PT
- Abdomen: nondistended, nontender
- Neuro: hip flexor strength 5/5 b/l; dorsi/plantar flexion right 2/5, left 5/5
- Skin: dusky appearance of distal RLE, this region markedly cooler temperature than LLE
